

Objectives and investment policy

Objectives
The objective of the fund is to generate high absolute return. The share class is accumulating.

Investment policy
The fund mainly invests in long and short positions in bonds and fixed income markets primarily in the Nordic, but also Euroland, UK and US. The fund aims to utilise imbalances in the markets by investing in both traditional government bonds and mortgage bonds as well as financial derivative instruments. The fund aims to protect the investments by hedging the interest rate risk fully or partially, as well as by investing in a number of different strategies. The gross exposure is capped at 150 times the value of net assets. The investment strategy is active. This means that there may be significant differences in the return relative to the alternative investment fund's target. The fund is categorised as article 8 under SFDR and promotes environmental and/or social characteristics, as well as good governance practices, through screening, exclusions, investment analysis and decision-making as well as active ownership. The fund follows Danske Invest's responsible investment policy. Fund shares can normally be redeemed on banking days with one week's notice. Recommendation: This alternative investment fund may not be appropriate for investors who plan to withdraw their money within 3 years.

Latest fund report

In March, Danske Invest Hedge Fixed Income Strategies provided a return of 0.89%. Year to date, the return is 4.36%

March was a negative month for risky assets with both US equities and European equities declining. There is increasing evidence of a slowdown in economic activity in the US while leading indicators for Europe has been surprising to the upside recently. The labour market remains solid in both US and Europe.

2025 has the potential to be very interesting. Market focus remains centred on new announcements from Trump on tariffs and countermeasures from in particular EU, Mexico, Canada and China. Uncertainty regarding the rate path from both the ECB and the Fed remains high.

Covered bonds, curve trades, cross-currency swaps and country spreads were all investment areas that contributed very nicely with positive performance during the first 3 month of 2025. Some of our protection trades had a more difficult start of the year and gave a negative return.

Looking into the rest of 2025, there are still many attractive investment opportunities, and the expectation is for the fund not just to reach the target return (risk-free rate + 3%-5% per year), but we find it realistic that we will outperform the target return going forward.

Geopolitically, there remains significant uncertainty, with the conflict in Israel/Gaza and in particular the Ukraine/Russia war drawing substantial attention. Tensions with China also continue to be a focal point concerning the geopolitical situation.

On the positive side, it also appears that the regulation, which regularly affects banks, continues to reduce the different banks' risk appetite. Going forward, we expect this scenario will provide us with attractive opportunities as investors.

At the end of March, the portfolio risk level (in terms of Value-at-Risk) is approximately 25% below our maximum risk limit, which is more or less unchanged since the beginning of the month.

Historical returns are not a reliable indicator of future returns. It should be noted that monthly returns (in percent) are non-additive.

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products.

Return in the period: 30.04.2020 - 30.04.2025

The default for the chart is the return for the past 5 years as of end of month or, if the fund is less than 5 years old, since launch. Past performance is not a reliable indicator of future results. Future returns may be negative. The return may increase and decrease as a result of currency fluctuations if the fund is issued in a currency other than the currency used in the country in which you are domiciled.
